Archias' Hybrid TOMATOES

Advantages of Hybrid Tomatoes

It has been proven that true hybrids grow faster than open pollinated varieties, produce greater yields, show more vigor, and bear a more uniform product over a longer period of time. It is possible to incorporate into hybrids, disease resistance, the best feature of their parents, and to eliminate many of the bad features. If you want uniform fruit, extra yield, and better quality, we highly recommend the hybrid varieties listed below. The proper use of fertilizer in your soil is essential with hybrids as well as with other varieties.

For those who prefer Certified Seed Corn. We believe we have the finest, most reliable certified growers anywhere. Our Certified U. S. 13 is produced under State supervision—is well graded, tested and pure strain. You'll be well pleased. See prices below.

U. S. 13

Main Crop Yellow—120-125 days

A grand hybrid in every way and very popular throughout the Corn belt. Single ear tendency. Deep kernels high in feeding value. Resistance to drought and chinch bug. Shucks easily. Stands up well.

Missouri 8

Main Crop Yellow—120-125 days

Developed by Mo. Agricultural College. In use for 8 years. In 6-year trials in Missouri, outyielded Reid's Yellow Dent 36 per cent. A smooth, yellow Corn, not flinty, prolific, tending to two or more good ears on fair soil and in good season. Big-rooted, strong-stalked, making it drought and wind resistant. Is also disease resistant. Dark green foliage.

Missouri 148

120-125 days

A very tall hybrid with deep green foliage. Ears borne high, are long and somewhat tapering. Kernels medium yellow with medium indentation. Resistant to lodging under most conditions. Best adapted to the area south of the Missouri river. No. 148 was near the top in many of the state yield tests.

Certified Kansas 1639

Kansas 1639 is a midseason yellow hybrid just slightly later than U. S. 13. Especially well adapted to northern and central Missouri where it has exceeded U. S. 13 in yield.

Kansas 1639 is similar in height to U. S. 13, ears borne lower on the stalk. Better stalk lodging resistance, drops fewer ears, has better husk cover, is more drought-resistant than U. S. 13.

Kansas 1639 has a very good appearance and should be liked by farmers who are looking for an improved U. S. 13.

2 Outstanding White Hybrids

U. S. 523W A new white hybrid recommended by the University as adapted for southern and central Missouri and adjoining states to the South. May also be planted in the Northern region providing planting is reasonably early. About the same maturity as Missouri 8 and Kansas 2234. An excellent yielder with good standability and husk color. Grain type and quality suitable for milling purposes. Mostly single eared, resistant to Corn ear worm, grasshoppers, and chinchbugs. It is a top producing hybrid in Missouri.

Funk's G-777W This white hybrid has made an outstanding record over a wide area of Missouri and Kansas. Medium stalks of excellent quality carry the ears about waist high. Good on both upland and bottom soils; has done very well on light soils. Sound grain, wide kernels with top milling quality. G-777W is a medium late white Corn that yields with the better yellow varieties.

FUNK'S "G" HYBRIDS

G-704 Outstanding Corn for south Kansas and southern Missouri. A few days earlier than famous G-711. Was developed especially for the G-711 belt in Missouri and Kansas. Starts fast in cold wet soils, gives better stands, has more early vigor, takes heat and drouth. Full season.

G-711 Famous for high yields and heavy tonnage. Noted for its adaptability to many types of soil and climatic conditions and its superior drouth, heat and insect resistance; for its big, cylindrical ears. Exceptionally high yielding on medium to high fertility levels.

G-77A New but well proved. Our earliest hybrid, yet yields are excellent. Fine standability. Resists insects and drouth.

G-91 New—Different—Better. This is the newest product of Funk's G-Hybrid Research. Slightly earlier than G-94 or G-95. Funk's G-91 contains some brand new inbred lines that make for a good stand, more early vigor, blight resistance and borer resistance. Ideal for hand and mechanical picker. A proven heavy yielder. Seed supply short. Order early.

G-95A A great new challenger that is taking the place of our fine old G-94. Farmers who use G-95A are convinced it's a real top yielding, top performing hybrid. You, too, will like its rapid early growth, and its greater drouth, insect, disease resistance. G-95A holds its big, girthy, solid ears on better stalks. Makes great bushelage of fine quality Corn with medium dent kernels. Good girth and full length of the ear helps make it a fine picker Corn. A little earlier in maturity than G-94, G95A is one of our best yielding hybrids.

G-99 Distinctive with very long ears—lots of them. Has won many friends in the past two years. Sturdy stalks. Huge yields. A day or two later than G-94.

Funk's G-134 Tough and rugged—this new variety is similar to G-99. The only difference is that it is extremely resistant to drouth, insects and disease, and has a wide range of adaptation. G-134 matures large cylindrical yellow ears on green stalks, stands up and has great yielding ability. This husky, hardy hybrid will soon be one of the most popular varieties across central and south Missouri and Kansas.

G-79 A dependable high yielding hybrid for soils of low fertility. Maturing about the same as G-80. G-79 starts off fast, will take lots of heat and drouth. Uniform large ears. Borer and blight resistant.

G-80 Big beautiful ears; strong stalks; great resistance to drouth and insects have made this one of our most popular Corn Belt type hybrids. A tremendous yielder.

It has smallest cob of any large grain. Is rich in oil. It will fatten faster than any Corn grown. It suits the grain dealer and tops the market. It takes first prize wherever shown.

It matures in about 110 days and is one of the highest yielding open-pollinated varieties available today.

Reid's Yellow Dent

This is Missouri's best known variety, but all Reid's Dent is by no means equal in production. Many strains have been allowed to deteriorate. Archias' strain is grown by Missouri's best known Corn grower—he has won first prizes consistently wherever this Corn is shown. Painstaking selection and constant supervision has made this strain "tops" for Reid's Yellow Dent. The average maturity is 110 days. Early Red Snowcap

The earliest red Corn of all. Matures in 80 to 85 days. Kernels are of a bright cherry-red color, with yellowish cap—the result of a cross between a Red Flint and Yellow Dent. This Corn often matures in less than 80 days. See the farm seed price list for prices.

Midland Yellow Dent

A medium late maturing Yellow Corn, requiring normally 130 days to mature. The stalk is large compared with Reid's Yellow Dent. The ears average 7½ to 9½ inches long. Medium large in circumference, has a medium large cob. This variety is noted for its heavy yield and for its freedom from root rot diseases. Very few damaged ears.

90-Day Yellow

A quick growing yellow variety, highly desirable and popular with feeders who want an early feeding Corn. Matures in about 90 days. Archias' 90-Day Yellow ears are about 10 inches long, sometimes two to the stalk; deep, moderately rough kernels high in protein and oil content make it an excellent feeding Corn.

HICKORY KING

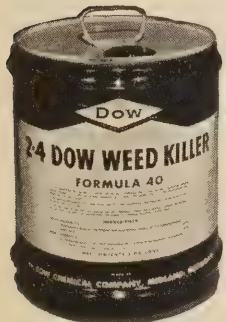

The white grain is so wide and deep, and the cob so small that often a single grain will cover the end of a broken cob. It has been called the Poor Man's Corn because it can be depended upon to produce a crop on poor, thin land. On good land it bears 2 ears to the stalk. By mail, postpaid, 1 lb., 45c; 3 lbs., \$1.25. By express or freight, pk., \$2.50; ½ bu., \$4.50.

BIRDSFOOT TREFOIL

Sow 4 to 6 lbs. per acre alone—less in mixtures. A hardy deep rooted, long lived legume, fine stemmed and leafy with feeding value equal to Alfalfa. Will grow on land too low in fertility for Alfalfa; stands heat and drought. Especially valuable in permanent pastures. We offer only the broad leaf variety which is recommended for this section. See Field Seed Price List for prices.

PIG'S DELIGHT QUICK HOG PASTURE

A rapid growing mixture of legumes, forage and grass crops. Can be used a few weeks after seeding. Very productive. High in protein. Builds big body frames, reduces grain consumption. Makes hogs of marketable size in quicker time. Contains Vetch, Rape, Rye, Barley, Sudan, Wheat, etc. Sow 50 to 60 lbs. per acre early in spring.

\$10.00 per 100 lbs.; 50 lbs., \$5.25.

FIELD CLOVER

See Our Farm Seed List or Write for Clover Prices!

RED CLOVER. Native Missouri grown. Extra fancy, clean, high germination. It pays to plant the best. Clover that is adapted to Missouri soils and conditions is the cheapest in the long run. Beware of poor quality foreign seed offered at lower prices.

MAMMOTH RED CLOVER. Is a large variety of Red Clover, superior for soil building. Our stocks are the very finest.

LADINO White Clover

U. S. Department of Agriculture says: "Ladino is the largest growing form of White Clover. It is similar to White Dutch, but grows twice as large." It is a long-lived perennial, excellent for grazing, as well as producing a most nutritious and palatable hay crop. Its tap root goes down one to three feet. The stems run on the ground, taking root. It is not subject to Alfalfa diseases and is ideal to plant after Alfalfa. It does not bloat livestock as much as other Clovers, but is safer to plant with Timothy, Red Top, Tall Fescue, Kentucky Blue Grass, Orchard Grass and Rye Grass.

See Farm Seed Price List for quantity prices.

KENLAND Red Clover

Blue Tag "Certified"

A new, very productive variety, disease resistant, and highly recommended for those that are looking for an improved medium Red Clover. Kenland has definitely been proved superior in every way including a much longer "stand" life. We believe that it will pay you to use this new strain.

See Farm Seed Price List for prices.

ALSIKE Clover

Grows Where Other Clovers Fail

Alsike does well on low, wet, heavy soil where Red Clover, Sweet Clover and Alfalfa can't take it.

Alsike hay is high in protein, and fully equals Red Clover in feeding value. Does fine planted along with Timothy, Tall Fescue, or any other good grasses. Alsike seed being small, requires only 6 to 10 pounds per acre. Our Alsike is hardy, northern grown, the very finest quality, dark, green berry, free of noxious seeds. It pays to plant the best.

See Farm Seed Price List for prices.

SWEET Clover

Surpasses all crops in soil building qualities. Stores large quantities of nitrogen in the soil, increases fertility and humus. A valuable pasture crop.

- White Blossom Sweet Clover.
- Yellow Blossom Sweet Clover.
- Unhulled Sweet Clover. (White Blossoms.)
- Hubam, Annual Sweet Clover.
- Madrid, New Yellow.

ALFALFA

Archias' northern and native grown Alfalfa deserves to rank first among legumes. Extremely deep rooted, withstands drought as well as severe winters. It furnishes more green foliage, more pasture and dry hay per acre than any known variety of hay or grass. Plant Adapted Seed—approved for AAA payments, same money and get dependable seed by buying your Alfalfa from Archias.

- "Sure Brand" Kansas Archias.
- "Sure Brand" Oklahoma, Approved.
- "Sure Brand" Rocky Mountain.
- "Sure Brand" Utah Beehive.
- "Sure Brand" Genuine Grimm.

MILLET SEED

Sow 30 to 40 pounds to the acre
GOLDEN or HAY MILLET. It is sown in the spring, and after harvesting leaves the ground in the finest condition for Wheat.
PROSO MILLET. Also known as Hog Millet. Grown almost exclusively for seed, yielding up to 60 to 70 bushels per acre. Excellent poultry feed. Needs warm weather and soil for quick germination. Sow 40 to 50 lbs. to the acre. Drill in close rows or broadcast.

TALL OR KENTUCKY "31" FESCUE

Discovered growing many years ago on a mountain farm in Kentucky, hence its name. A perennial bunch grass, puts out blades in great number. Is best suited as a permanent pasture since it improves with age, building up a heavy, dense sod, prevents erosion, produces a large amount of succulent pasture the year around. Grows anywhere but the better the soil, the better the grass. Sow in middle August, September or early spring months. We offer the very finest strain, free of noxious weeds and rye grass. See Farm Seed price list for prices.

ALTA FESCUE New Wonder Grass.

There's nothing like it. Heavy yielding wonder grass lives 20 years or more, is highly palatable, a summer producer, soil builder and weed eradicator. Alta Fescue produces as much or more fall and winter foliage as other grasses adapted solely to those seasons. Produces more summer foliage than all but the strictly summer-growing grasses. High feeding value and palatability. Rapid recovery after pasture. Wide adaptability to soils, climate, and moisture. See Field Seed list for prices.

ALTA "144" FESCUE

"Certified" Blue Tag

A somewhat softer leaf than regular Alta. Considered by many the most valuable of all the Fescues yet developed. This softer leaf is maintained throughout the entire growing period, making it ideal for pasture. Available stocks are still scarce. See Farm Seed Price List for prices.

NOW! "Chemical Coated" Farm Seeds

Assure Better Stands

This chemical protection is a special formula of various disinfectants with root growth stimulant added. This kills diseases that affect germination and plant survival and increases root growth.

When the seed is sown during cold, wet weather, newly planted seed is often attacked during the germinating period causing the sprout to die. "Chemical coated" treatment kills these disease organisms, giving the new sprout an opportunity to come through the soil and survive. This is why you get so much larger percentage of plants from "chemical coated" seed.

COST OF THIS TREATMENT

Because many of our customers not being familiar with this new improvement in agriculture still want their seed untreated. Consequently, our price list on most items does not include "Chemical coating." If you are one of the many that prefer your seed to be treated, we are equipped to render this service quickly using the very latest model of slurry treaters, the best known formula at the following reasonable prices. In ordering, mention which lot you want "chemical coated" and add to your order for this service as follows:

Most Clovers, Lespedeza, Alfalfa, Oats, Beans, Sudan and similar size seeds:

\$1.25 per 100 lbs. extra.

Grasses, Timothy, Brome, Orchard, Fescue, Ladino, Red Top and similar seeds:

\$1.75 per 100 lbs. extra.

When coating "certified" seed we must break the seal. Please keep this in mind, when ordering as they cannot be coated in a sealed bag.

BROME GRASS

"The Miracle Drought Resister"

Sow 20 lbs. per acre.

One of the most sensational additions that American agriculture has received in years. It is rather slow the first season, but the second year is great and once established you have it for keeps. It is hardy, permanent, stands the driest of droughts, the hottest summers, and the coldest winters. It is the first green grass in the spring, the last in the fall, and stays green all summer when other grasses are dry. It is very high in feeding value; will carry from 50 to 100 per cent more livestock per acre than Blue Grass. Cut for hay, you will have from three to four tons per acre. All classes of livestock like it as it is very palatable. It is a grass and so cannot poison the stock. Sow either fall or spring, using 15 to 20 lbs. per acre. Have a firm, well packed seed bed, harrow in lightly and roll well if at all possible. Do not cover too deeply—one-fourth to one-half inch is plenty. You can get two crops in a season. Harvest when it is one-third to one-half in bloom. It is easily killed under cultivation if you want to get rid of it. Our Brome Grass is Achenbach (Southern Strain). Native Kansas Strain. 10 lbs., \$5.75, postpaid. See Field Seed List for quantity prices.

Orchard Grass

One of the best long-lived, deep-rooted grasses for year round pasture or hay or to reseed on old Alfalfa sods. It does well on practically every type of soil, including acid soils, thrives in the shade, grows vigorously and produces large crops of nutritious hay relished by all livestock. It recovers quickly when cut or grazed. It grows the year round with maximum growth in the spring and fall. Should be included in every hay or pasture mixture. Sow 14 lbs. per acre with other grasses or 30 to 35 lbs. alone in early spring or fall.

See Farm Seed Price List for quantity prices.

Broom Corn

(Evergreen.) A fine crop for dry land farming where there is a market for the straw for brooms. It has practically no food value. Plant in 3 1/2-foot rows, thinning out to stand 8 to 10 inches in the row and cultivate like Corn. 6 lbs. per acre. Lb., 45c; 5 lbs., \$1.75, postpaid. See farm Seed price list for quantity prices.

Reed Canary Seed

On low, wet, poorly drained soils, on thin, eroded hillsides Reed Canary comes through like a champion. It is the lowest priced this year since its introduction. Because of this low price we think more farmers than ever before should sow Reed Canary Grass.

Reed Canary makes wonderful pasture, excellent high yielding hay and once established makes a tough sturdy sod that lasts for years. See Farm Seed Price List for Prices.

SUDAN GRASS

WHEELER SUDAN. "Certified." Sudan is primarily a hay grass. Its slender, leafy stems make it easy to handle with ordinary haying machinery, making its greatest growth during July, August and September when native grasses are less productive. Will grow successfully on most every class of soil. Ready to cut in 45 days. Broadcast at the rate of 20 to 30 pounds per acre. Cut when in bloom for highest feeding value. Our strain of Wheeler Sudan is "Blue Tag" certified. It is the best obtainable and the cleanest seed of this strain. Much preferred to the non-certified Common.

SWEET SUDAN. "Certified." Sweet Sudan is a greatly improved variety from a hybridization of Leota Red Sorghum and Common Sudan. It has great palatability, live stock eating it to the ground before touching Common Sudan. Stalk contains more sugar, making it higher in feeding value.

PIPER SUDAN. "Certified." Piper Sudan Grass was developed and released in Wisconsin by the Agricultural Experiment Station, and has been extensively tested in Missouri and found to be taller than Wheeler, recovers faster after cutting, and has greater leaf spot and chinch bug resistance. Growing plants have shown far less prussic acid potential than other varieties. We have had some excellent reports on this variety this last year.

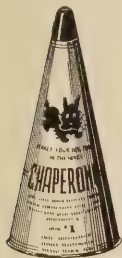

GREENLEAF SUDAN is a Kansas introduction, and one of the finest of the new Sudans. Strong resistance to leaf disease. Low in prussic acid, superior in tillering, leafiness and vigor. If you want Sudan for pasturing this variety is recommended as the safest of all Sudans for this purpose.

Now—HORMONE and ARASAN treated—at no extra cost.

ARCHIAS' HORMONE AND ARASAN TREATED LAWN SEED will give you a healthier, greener, more permanent lawn than untreated seed will. You use less of Archias' lawn seed because our seed is cleaner, more weed and chaff free. For new lawn—sow at the rate of 1 pound to 250-400 square feet. To replenish old lawn, cut quantity in half.

SOIL-SOAKER

Lawn Weeds and Crab Grass

When Zotox is
applied in the
minimum solution
it kills crab grass
without destroy-
ing permanent
lawn grasses. The
selective action is
attributed to the
fact that crab
grass has broad-
er leaves and ab-
sorbs more of the
chemical than do
the narrow-leaved
turf grasses. Be-
ing a shallow-
rooted annual al-
so makes crab
grass less resistant
to Zotox than
are the deep-rooted
perennial grasses.
Zotox is sold in four convenient
sizes. 8 ozs., \$1.00; 16 ozs., \$1.50;
32 ozs., \$2.50; 5 lbs., \$4.50.
An 8-oz. bottle treats 1000 to
